## The best for my lawn

Lawn care

# GARDENA – Everything for the garden

High-quality products. Beautiful gardens.

## GARDENA – the full-range supplier

GARDENA provides everything you need to tend your garden and keep it looking great. Whether products for lawn-, tree- and shrub care, tools for soil cultivation, irrigation solutions or pumps.

## GARDENA – with system

The system concept characterises GARDENA's products. This principle is reflected in many product ranges: It makes handling simple, expands your options and conserves resources.

## GARDENA – in any season

With GARDENA products, you care for your lawn all year round and keep it in excellent shape – regardless of the season.

## GARDENA – your advantages

### 1. Quality

GARDENA products are known for their extremely high quality and reliability. The entire production chain is subject to the strictest inspection cycles and quality guidelines.

### 2. Innovation/Technology

GARDENA develops products that render garden work as easy and efficient as possible. That's why the product portfolio is continuously further developed and optimised – with the latest technology.

### 3. Ergonomics/Comfort

GARDENA places high value on the ergonomics of their products. They should lie comfortably in the hand and make garden work easier.

### 4. Service

Should your product require repair or maintenance, the GARDENA Service experts are there for you. More at [www.gardena.com](http://www.gardena.com)

# GARDENA Lawn care

## Mow the lawn

The first step for a beautiful lawn is a regular cut. Simply select the right GARDENA model for your demands.

More on page 4

## Trim

Lawn edges remain wherever a lawnmower cannot reach. Using a trimmer in difficult-to-access corners and edges gives the lawn a perfect appearance. Electric or battery-powered trimmers quickly and comfortably shorten edges.

More on page 7

## Trimming lawn edges

A lawn looks harmonious when the edges have been adjusted to the lawn height. For this work, GARDENA offers manual, battery-powered and electric grass shears.

More on page 7

## Aerate and rake

A beautiful lawn needs to breathe. Lawn aerators and rakes provide oxygen deep into the soil and keep your lawn sustainably free of weeds, moss and thatch.

More on page 9

## Seed and fertilise

There are times when your lawn needs support: e.g. after extreme weather periods or strong use. The GARDENA spreader can then help with seeding and fertilising.

More on page 10

## Lawn care

Pulling weeds, removing leaves or grass clippings is easy – when the right tools are at hand. GARDENA has the right solution for every task and the right product for every garden task.

More on page 11

## DID YOU KNOW...

That GARDENA solutions can save you heaps of stress and money, as they all fit together perfectly? You benefit from the fact that tools and elements can be combined in multiple ways.

# Mow the lawn

Not all lawns are the same. Regardless of what demands you place on your lawn, the right care is vital. Long term measures at the right time will make your lawn the jewel of your garden.

## Why?

Regular mowing stimulates the growth of the lawn, increases the grass density and thereby the lawn's beauty.

## How?

Minimal but frequent mowing is often better than seldom, strong mowing. With each cut, as the rule of thumb goes, the grass blade should be shortened by about a half to two-thirds, to approx. five centimetres. In midsummer, you should let the grass remain somewhat longer so that it can better withstand dry periods. And if you have neither time nor the desire to regularly mow the lawn yourself, a Robotic Lawnmower may be the perfect solution.

## When?

The lawn mowing season begins in March/April when the climate is mild and the lawn length approx. 8 cm. Ideal mowing conditions are rain-free days with an overcast sky and dry lawn. The best time to mow is before noon. Alternately, you can get to work in the early evening hours. At the end of October, before the first frost, you should mow one last time before the winter break.

## How often?

For an even lawn result, mowing once a week in the main growth period is recommended.

Rotary Lawnmowers

# Mow the lawn

A healthy lawn is a part of any beautiful garden. Mowing is one of the most important tasks for this. Only frequent mowing ensures a lush and thriving lawn. Whether you have a small- or large area – GARDENA offers you a large variety of lawnmowers. You're sure to find the right model that is suitable for your garden.

## GARDENA Robotic Lawnmower

- Mows the lawn all by itself
- Returns to the charging station on its own
- A perfectly cared-for lawn at all times thanks to the razor-sharp blades

## GARDENA Cylinder Lawnmowers

- For highest demands
- Cutting cylinder and bottom blade do not touch
- A perfect cut, as with shears – golf-course quality

## GARDENA Rotary Lawnmowers

- For normal cutting-quality demands in the home- and allotment gardens
- Horizontally rotating blade unit captures the grass stalk and cuts it off
- Larger areas can be mowed in a short time

## Robotic Lawnmower

Never mow the lawn yourself again.

With the GARDENA Robotic Lawnmower, time consuming lawn care becomes relaxation. While you enjoy your free time, the Robotic Lawnmower takes over the bothersome work all on its own. Lawn mowing has never been easier and more convenient.

- Mows the lawn on its own and independently recharges at the charging station
- Daily mowing and mulching ensure a perfectly cared-for lawn and save the removal of grass cuttings
- The boundary wire defines the lawn area to be mowed
- Easy installation and initial operation
- Low-noise, emission-free and energy-saving
- Theft-protected through PIN code and alarm function

Article No.	4071	4072	4052	4054

## TIPS AND TRICKS

Each time you mow the lawn, change the mowing direction and the mowing pattern. That way, you will get a perfect lawn with a regular cross-section.

## Hand Cylinder Lawnmowers

### Hand Cylinder Lawnmowers

Precision mowing as with shears. Smooth-running, low-noise and easy to push. For lawn areas up to 500 m<sup>2</sup>, as a hand tool, or electric or battery-powered.

## Rotary Lawnmowers

## PowerMax™ 34 E, 37 E and 42 E

Ergonomically shaped handle  
For convenient and efficient operation (except 34 E)

**PowerPlus motor**  
With high-torque gear drive delivering excellent results under the most difficult conditions

**DuraEdge™**

**DuraEdge Blade**  
Double hardened, precision ground blade for a superior cut

### Handle height adjustment

- Height-adjustable handle for advanced user comfort
- Can be adjusted to the body height of every user (except 32 E/34 E)

### Flexible use 3-in-1

- Can be set to mow and catch or mow and mulch (except 34 E)

### Manoeuvrable and flexible

- Large rear wheels (except 34 E)

### Edging combs

- For neatly mowing along walls and lawn edges

## TIPS AND TRICKS

Lawns should not be cut in wet conditions, as the blades of grass clump together and cannot be trimmed cleanly. In addition, the lawnmower wheels can sink into the lawn when the soil is wet and therefore the damage grass roots.

# Trimming and adjusting lawn edges

A harmonious lawn appearance includes precisely cut lawn edges. A perfect lawn contour is achieved with mechanical grass shears, battery grass shears, or a trimmer, depending on the demand and length of the lawn edge.

## Why?

Lawn edges are normally not reached by lawnmowers. That's why they are often longer and not precisely cut. There is no clear bordering against other garden areas and the lawn can grow into surrounding beds.

## Where?

At difficult-to-access lawn edges around the bed, patio, trees and pond; along fences, gravel paths or natural stone walls.

## When?

Best is before or after each mowing session.

### GARDENA Turbotrimmers

A trimmer is useful wherever the lawnmower cannot reach, e. g. between shrubs, on steep slopes, in high grass, strong grass or weeds. With the use of a plastic filament or blade, grass and lawn edges can be comfortably cut with little effort and without bending over.

### GARDENA Accu Grass Shears

You'll cut lawn edges comfortably and precisely with the battery-powered grass shears. Lawn edges in larger areas can be shortened without effort but with care, also around ponds, beds or patios.

### GARDENA Grass Shears

The mechanical grass shears are ideally suited for lawn edges in smaller gardens and areas. Also in narrow and difficult-to-access spots, they ensure a perfect lawn.

## Trim

Item description	 <b>SmallCut 300/23</b> For small trimming tasks.	 <b>EasyCut 400/25</b> Flexible all-round trimmer for longer edges and hard-to-reach spots.	 <b>EasyCut Li-18/23R</b> Cable-free trimming of lawn edges thanks to powerful lithium-ion batteries.	 <b>PowerCut 650/30</b> Professional trimmer for large areas with dense grass growth and weeds.

## TIPS AND TRICKS

Cut the edges of the lawn before mowing. The cuttings from the lawn edges will be gathered in during mowing, saving you time and reducing the amount of raking required.

# Aerate, rake, fertilise and care for

Everything that is good for the lawn makes it more beautiful: This begins with the ideal seed planting and continues with the removal of thatch and moss, sufficient oxygen to the roots, and the supply of nutrients. When you care for your lawn and continuously free it from weeds, you'll be able to enjoy lush, dense green grass.

## Why aerate?

Over the entire year, dead grass stalks, moss and fungus collect on the lawn and hinder its thriving. During aerating, specially ground blades slice into the turf by a few millimetres. At the same time, the lawn is powerfully and sustainably freed from thatch, moss and weeds, thus providing more space, air and water to the roots. Roots can expand and take up vital nutrients.

## When aerate and how often?

After mowing, once or twice per season, in spring and autumn.

## Why fertilise?

With every cut, a lawn loses nutrients. To prevent this, you should regularly fertilise your lawn to ensure optimal care.

## When fertilise and how often?

A lawn is normally fertilised starting in March/April at intervals of four to five weeks until a final autumn fertilising in September to prepare for the winter.

## Why rake?

To successfully prevent thatch and moss all year round, the lawn can always be raked – in contrast to aerating. Stainless steel springs remove thick thatch and newly forming moss from the lawn, thereby providing quick, convenient and gentle care.

## When rake and how often?

After each 2nd or 3rd mowing – all year round.

## Why care for the lawn and remove weeds?

To ensure optimal care of your lawn, it is recommended to remove grass cuttings, leaves and weeds from the lawn.

## When remove weeds and how often?

A lawn needs to be cared for all year round – as soon as grass cuttings, leaves or weeds collect on it.

**Aerate**

**Rake**

**Seed and fertilise**

**Lawn care**

## Aerate

### Electric Lawn Aerator EVC 1000

Intensive treatment for your lawn. Recommended in spring and/or autumn.

Sharp, offset blades made of specially hardened, galvanised stainless steel penetrate the lawn by a few millimetres and remove thatch and dead grass from the soil.

For areas up to	approx. 600 m <sup>2</sup>
Weight	10.6 kg
Output	1000 W
With PowerPlus	•
Working width	30 cm
Grass catcher	optional
Measured SWL (dB)A	93
Guaranteed SWL (dB)A	94
Measurem. uncert. (dB)A	3
Vibration level m/s <sup>2</sup>	< 2.5
Article No.	4068

## Rake

### Electric Lawn Rake ES 500

Year-round care, can be carried out after each 2nd or 3rd mowing session.

Low-wear stainless steel springs comb the lawn and gently remove moss and thatch. The springs can be easily and individually exchanged.

For areas up to	approx. 600 m <sup>2</sup>
Weight	9.5 kg
Output	500 W
With PowerPlus	•
Working width	30 cm
Grass catcher	optional
Measured SWL (dB)A	89
Guaranteed SWL (dB)A	91
Measurem. uncert. (dB)A	3
Vibration level m/s <sup>2</sup>	< 2.5
Article No.	4066

## TIPS AND TRICKS

Brush extra sand into your lawn after aerating it. This will make your lawn more permeable to water, air and nutrients.

## Seed and fertilise

## Lawn care

### combisystem Gather Rake

Frees the lawn from grass cuttings and leaves. With grass trapping bar.

Recommended handle length 180 cm  
Article No. 3381

### combisystem Plastic Fan Rake XXL vario

For large-scale and time-saving raking of grass cuttings, leaves, etc. Can be divided into two parts for comfortable collection of the raked material. Width 77 cm.

Recommended handle length 130 or 150 cm  
Article No. 3107

New!

### combisystem Plastic Adjustable Rake

For fine and coarse sweepings, leaves and grass cuttings. With elastic, adjustable plastic tines for raking leaves, grass cuttings, scarified material etc. Variable working width of 35–52 cm

Recommended handle length 130 cm  
Article No. 3099

### combisystem Lawn Edge Trimmer

For clean cutting of lawn edges. With hardened, sharpened steel edge. Can be used like a spade or pushed along the edge of a lawn

Recommended handle length 130 cm  
Article No. 3149

### Weeding Trowel

Effortlessly remove weeds – without bending over and without dirtying hands.

Article No. 3517

## TIPS AND TRICKS

### Tackling the root of the problem

The weeding trowel enables you to easily remove weeds roots and all. To ensure that the hole in the soil quickly grows over, simply insert the trowel back into the ground and scrape the soil into the centre.

### Easy functioning principle

1. Press into soil
2. Turn 180° to the right
3. Pull out – finished
4. Easy removal through the press of a button
